Four-dimensional space - Wikipedia A four-dimensional space or 4D space is a mathematical extension of the concept of three-dimensional or 3D space. Three-dimensional space is the simplest possible generalization of the observation that one only needs three numbers, called dimensions, to describe the sizes or locations of objects in the everyday world. Four-Dimensional Geometry -- from Wolfram MathWorld Four-Dimensional Geometry Four-dimensional geometry is Euclidean geometry extended into one additional dimension . The prefix "hyper-" is usually used to refer to the four- (and higher-) dimensional analogs of three-dimensional objects, e.g., hypercube , hyperplane , hypersphere. The Fourth Dimension and Non-Euclidean Geometry in Modern ... In this groundbreaking study, first published in 1983 and unavailable for over a decade, Linda Dalrymple Henderson demonstrates that two concepts of space beyond immediate perception—the curved spaces of non-Euclidean geometry and, most important, a higher, fourth dimension of space—were central to the development of modern art.

Yes, fourth dimension is time, there are three spatial dimension and one temporal dimension. time is temporal dimension, which is responsible for physical change. Four dimensional world geometry is explained by using Euclidian geometry whereas N dimension geometry is explained by using Riemann geometry.

geometry - What is the fourth dimension of a Tesseract ... Is the fourth dimension of the Tesseract time? Is that why it is represented as a moving 3D structure on Wikipedia? Is that why it is represented as a moving 3D structure on Wikipedia? I am asking because I have trouble understanding what it is.
